

Seaboard Marine & Starter Motors

One of the big advantages of the Cummins Marine Engine product line is because the “base engine” is also used in automotive, trucking, & industrial applications. High volume multiple markets keep the costs LOW. Because of this, Cummins took advantage of using both starter motor and alternator designs of common sizes, mostly of “DELCO” type. At Seaboard, we have taken that to the next level two distinct ways:

1) By supplying OEM quality starters and alternators at much lower costs than from Cummins or for competitive engines that use proprietary parts at sometimes ridiculously high prices.

2) You don't need part numbers, engine serial numbers, etc, when you call us, —Just tell us what engine you have—Like a “6BTA 5.9”, “370 Diamond” or a “450 Diamond”. From there we may ask you the vintage of the engine and possibly one or two other things to zero in on exactly what you need—all very simple.

We've done all the work and know what will fit your engine as a “Plug & Play” high quality replacement.. We learned years back that you cannot always rely on a serial number to sort out parts on marine engines.. Only long term experience dealing with these engines in the field will assure you that the parts you get will be right the first time around.. Brad's the man, so just call him at (800) 200-BOAT(2628) and he'll get you fixed up in a jiffy.. Remember, our price includes UPS to your door in the lower 48 states..
